

Architects visit Greenwich 6th grade math students

Published May 25, 2016

Architects, Lisa Hayes and Paul Mays from *Butler Rowland Mays Architects*, spent the day with our 6th grade math students. They taught them all about what it is like to be an architect and then lead them through a project that allowed the students to design a zoo. They even learned how to create a budget for a large construction project. We thank them for providing this great opportunity for our students.
